GOMEZ INTERNATIONAL PATENT OFFICE, LLC 1501 N. RODNEY STREET SUITE 101 WILMINGTON, DE 19806			DASS, HARISH T	
			ART UNIT	PAPER NUMBER
			3693	

DATE MAILED: 09/22/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>		<b>Applicant(s)</b>	
	09/846,121		ELAD ET AL.	
	<b>Examiner</b>		<b>Art Unit</b>	
	Harish T. Dass		3693	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 05 July 2006.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-60 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-56 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) 57-60 are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 7/5/2006 has been entered.

### ***Election/Restrictions***

2. Newly submitted claims 57-60 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons: independent claim adds a limitation "creating a buyer's specification of at least one market protocol", and protocol related limitations, which was not presented in original set of claims, which requires separate search in separate class. Original presentation was for computer system.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 57-60 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Where applicant acts as his or her own lexicographer to specifically define a term of a claim contrary to its ordinary meaning, the written description must clearly redefine the claim term and set forth the uncommon definition so as to put one reasonably skilled in the art on notice that the applicant intended to so redefine that claim term. *Process Control Corp. v. HydReclaim Corp.*, 190 F.3d 1350, 1357, 52 USPQ2d 1029, 1033 (Fed. Cir. 1999). The term "ontology" in claim 18 is used by the claim to mean "meta-data", as it defined by applicants in remarks to claim 18, while the accepted meaning is not defined in any computer dictionary. The term is indefinite because the specification does not clearly redefine the term.

**DETAILED ACTION**

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3693

Claims 1-6 and 28-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shoham et al (hereinafter Shoham - US 6,584,451) in view of Lupien et al (6,012,046).

Re. Claim 1, Shoham discloses (a) creating a *buyers* abstract representation of at least one attribute of a request, and the relationship between at least one utility of the request and at least one state of the at least one attribute [*see entire document particularly - Abstract; Figure 2; C2 L1-L32; C3 L40-L59; C4 L41-L47; C12 L25-L30*]; (b) creating a *sellers* abstract representation of at least one attribute of an offer, and the relationship between the total price of the offering and at least one state of the at least one attribute [*Figures 6A-6B; C2 L47-L56*]; (e) signaling that the quantities and identities of assignments are accepted and that the transaction is committed by *buyers* and *sellers* [*figures 6B, 12#1232; C2 L25-L27; C6 L9-L16*]. *Shoham does not explicitly disclose* (c) computing a rating for overall satisfaction of the at least one attribute of a request with respect to a given offer, and (d) determining the quantity and identity of assignments of *sellers'* offerings to *buyers'* requests that produces the best set of matches for a given market. However, *Lupien* discloses (c) computing a rating for overall satisfaction of the at least one attribute of a request with respect to a given offer, and (d) determining the quantity and identity of assignments of *sellers'* offerings to *buyers'* requests that produces the best set of matches for a given market [*Lupien – abstract; C1 L50-L52; C2 L65 to C3 L5; C11 L21-L46*] to provides a substantially greater price discovery across the full range of trade sizes. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the disclosure of Shoham and

Art Unit: 3693

include computing a rating for overall satisfaction of the at least one attribute of a request with respect to a given offer, and (d) determining the quantity and identity of assignments of *sellers'* offerings to *buyers'* requests that produces the best set of matches for a given market, as disclosed by Lupien, to provide a crossing network that matches buy and sell orders (items, goods, etc.) based on satisfaction and quantity profile.

Re. Claim 2, *Lupien* further discloses (a) recording the request and offer data, along with the transaction price and quantity, for the committed transactions, and for other transactions that scored sufficiently well, and for requests and offers that were not matched in the market [*Lupien* –C6 L14-L29] *to store the buyers/sellers profiles in database which can be used later.* (b) inferring (COLLECTING) market value relationships from other data sources, such as *sellers'* advertisements, and or *buyers'* requests for proposals (market prices ) [C1 L50-52] *to set a market price.* And (c) using of mathematical function approximation techniques for constructing market value functions that describe the relationship between price and the states of various attributes in a hypothetical market [C5 L1-L7; C14 L25-L40] to compute a single size and price for transition. “It would have been obvious at the time the invention was made to a person having ordinary skill in the art to combine the disclosures of Shoham and Lupien to provide a system which can store market data and utilize the data to calculate price based on the stored and accumulated values for better approximate market value or average value.

Re. Claims 3-4, Shoham discloses (a) forming the best partition of the *buyers'* requests into groups or singletons of requests whose representation of attributes can be satisfied by the same *seller* offering [ C4 L56 to C5 L15];(b) forming the combined abstract representation of the requests for the consortium, said representation which will satisfy each *buyer* in the consortium[C1 L50-L60]. *Shoham does not explicitly disclose* (c) constructing an artificial negotiating entity that will represent at least one consortium, and can conceal the identities of the *buyers* in the consortium. However, Lupien further discloses this step [C1 L40-L67] to preserve the anonymity of the traders. "It would have been obvious at the time the invention was made to a person having ordinary skill in the art to combine the disclosures of Shoham and Lupien to not discloses the identity of the trader as a business practice and better competition.

Re. Claim 5, Lupien further discloses wherein the at least one attribute includes both intrinsic qualities of the object of the request or offer, and extrinsic qualities of the transaction or market protocols, wherein the extrinsic attributes comprise commitment protocols and time qualifications [C5 L1-L7] to allow traders to input variables (attributes) other than price and quantity as a profile to provide specifics what they are looking for. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the disclosure of Shoham and include intrinsic qualities and extrinsic qualities of trading object to better describe the nature of the object of trade.

Re. Claim 6, Shoham discloses (a) combining abstract representations from at least two market participants, to combine maximize the satisfaction for the consortium of those participants, and

(b) using *buyers'* consortiums rather than individual *buyers* and *sellers'* consortiums, or individual *sellers*, in determining the best set of matches, and whereby a transaction can be accomplished between consortia, rather than individual *buyers* and *sellers* (OBCS and SellCo which can be a company made of sellers e.g., agricultural cooperative club) [C2 L33-65].

Claims 28-33 have same limitations as claims 1-6 above, respectively. Therefore these claims are rejected with same rational as claims 1-6.

Claims 7-13, 16, 18, 22-27 and 34-40, 43, 45, 49-56, are rejected under 35 U.S.C. 103(a) as being unpatentable over Shoham and Lupien, as applied to claims 1-6 and 28-33 above, further in view of Conklin et al (hereinafter Conklin – US 6,141,653).

Re. Claim 7, Shoham discloses (a) forming the best partition of the *buyers'* requests into groups or singletons of requests whose representation of attributes can be satisfied by the same *seller* offering *and* (b) forming the combined abstract representation of the requests for the consortium, said representation which will satisfy each *buyer* in the consortium [C2 L57 to C3 L7; C4 L47 to C5 L14 ]. Shoham does not explicitly disclose

Art Unit: 3693

(c) constructing an artificial negotiating entity that will represent at least one consortium, and can conceal the identities of the buyers in the consortium; and automatically joining sellers' offerings in a consortium by: (d) forming the best partition of the sellers' offerings into groups or singletons of offerings which considered together achieve the highest values on hypothetical market transactions, with regard to the value functions constructed in claim 2; (e) forming the abstract representation of the offerings for the consortium, said representation which will represent each offer in the consortium; and (f) constructing an artificial negotiating entity that will represent at least one consortium, and can conceal the identities of the sellers in the consortium, and using the market value data from transactions to construct mathematical function approximations predicting the value of states of attributes for hypothetical transactions to construct a stream or compendium of market information. However, Conklin discloses (c) constructing an artificial negotiating entity that will represent at least one consortium, and can conceal the identities of the *buyers* in the consortium; and automatically joining *sellers'* offerings in a consortium by: (d) forming the best partition of the *sellers'* offerings into groups or singletons of offerings which considered together achieve the highest values on hypothetical market transactions (e) forming the abstract representation of the offerings for the consortium, said representation which will represent each offer in the consortium; and (f) a means of constructing an artificial negotiating entity that will represent at least one consortium, and can conceal the identities of the *sellers* in the consortium, and using the market value data from transactions to construct mathematical function approximations predicting the value of states of attributes for

Art Unit: 3693

hypothetical transactions to construct a stream or compendium of market information [Abstract; Figures 1c, -1g, 1j-1n, 3; C8 L49-L52; C18 L37-L65; C25 L21-L34] to provide comprehensive iterative bargaining abilities for both buyers and sellers that enable them to negotiate all the terms and conditions of a transaction not just the price. Lupien discloses and using the market value data from transactions to construct mathematical function approximations predicting the value of states of attributes for transactions to construct a stream or compendium of market information [C7 30-L53C20 L54 to C22 L45] to achieve highest value of mutual satisfaction. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the disclosures of Shoham and Lupien and add artificial negotiating entity and hypothetical market transactions, as disclosed by Conklin to provide comprehensive negotiating abilities for both buyers and sellers that enable them to negotiate all the terms and conditions of a transaction not just the price.

Re. Claims 8-13, Lupien further discloses further comprising numerically representing the determination of best assignments and quantities as an optimization problem and optimizing the assignments and quantities by finding the total of each *buyer's* and each *seller's* satisfaction with the transactions to be committed, comprises matching the at least one attribute of a request and the at least one attribute of an offer by inferring the match of the attribute qualities of a request which are logically implied by attribute qualities of an offer, and further comprising determining the quantity and identity of assignments of *sellers'* offerings to *buyers'* requests which produce the best set of

Art Unit: 3693

feasible matches for a given market, linear regression, numeric optimization, comprising using a total market excess value as the measure of highest total market value (satisfaction density) [C12 L33 to C14 L55; C12 L33-L36 (linear regression); C13 L48 to C14 L8 (numeric optimization)] to provide optimization approach which maximizes sequentially the mutual satisfaction at each stage of the allocation process, by assigning allocations based upon the highest remaining mutual satisfaction value and where the approach has the virtue of being computationally tractable and generally yielding allocations with tight spreads in price. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the disclosure of Shoham and Conklin and add optimization, as disclosed by Lupien, to best attributes which satisfies the transactions between the sellers and buyer.

Re. Claim 16 Shoham wherein the request and offer data, the transaction price and quantity, the committed transactions, other transactions that scored sufficiently well, and the requests and offers that were not matched in the market are made available to market participants [C7 L5-L45].

Re. Claim 18, Shoham or Lupien does not explicitly disclose wherein an ontology is used for inferring the match of the at least one attribute state of a request which is logically implied by the at least one attribute state of an offer. However, ontology or meta-data (as defined by the applicant in remarks) is known in object oriented software to capsule the attributes, properties and functions associated with the property of a

Art Unit: 3693

instance of an object (class) and store the object as a tool which can be modified without changing the software as whole and make use of the defined object as an entity. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the disclosure of Shoham and Lupien and include meta-data to make use of object oriented software for ease of use and maintenance of the software.

Re. Claims 22- 24, Shoham does not explicitly disclose invoking auction protocols when there is at least two requests per one offer or at least two offers per one request, wherein the abstract representation of the relationship of the utility of an attribute of the request, is created using at least one technique selected from the group consisting of (a) linear functions, (b) piece-wise linear functions, (c) logistic functions, (d) cubic splines, (e) look-up tables, and (f) other numeric functions that compute utility with respect to a given attribute's states, and wherein the abstract representation of the relationship between price of the offer and at least two states of an attribute of the offer, is created using at least one technique selected from the group consisting of (a) linear functions, (b) piece-wise linear functions, (c) logistic functions, (d) cubic splines, (e) look-up tables, and (f) other numeric functions that compute price with respect to a given attribute's states. However, these are well known for example, generally auction has more than one offer only the highest wins and statistical calculations are commonly done to calculate and predict the probability of success and efficiency of a process or an outcome with costly experiment. It would have been

Art Unit: 3693

obvious at the time the invention was made to a person having ordinary skill in the art to modify the disclosures of Shoham, Lupien and Conklin to add statistical analysis to predict the success of auction prior to auctioning the goods or service.

Re. Claim 25, Shoham discloses further comprising communicating the abstract representations of requests and offerings by termsheets and offersheets, respectively (allow buyers to quote prices and invite sellers to accept the quote and purchase terms) [C1 L24-L28; C10 L38-L50].

Re. Claim 26, Shoham does not explicitly further comprising describing the requests as employment positions and describing the offerings as employee attributes and compensation requirements. However, this is well known that an agent can request for employment.

Re. Claim 27. Shoham discloses further comprising describing the requests as tasks to be accomplished, and describing the offers as agents, people and or software, willing to accomplish those tasks [C1 L2 L17-L31].

Claims 34-40, 43, 45, 49-54 have same limitations as claims 7-13, 16, 18, and 22-27 above, respectively. Therefore these claims are rejected with same rational as claims 7-13, 16, 18, and 22-27.

Art Unit: 3693

Re. Claim 55, Shoham discloses wherein the information is communicated through the internet by internet protocol messages[C1 L15-L20].

Re. Claim 56. Shoham does not explicitly disclose wherein buyers and sellers access the system via web pages, Java clients, or other executable client programs. However, this is well known to which allows the user (buyer/seller) to place order using commonly distributed web browsers.

Claims 14-15, 17, 41-42 and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shoham, Lupien and Conklin as applied to claims 10 and 37 above, and further in view of Verba et al (hereinafter Verba – US 6236977).

Re. Claims 14-15 and 17, Neither Shoham nor Lupien or Conklin discloses comprising using a multiagent system to distribute the processing across many processors and memory devices to achieve timely calculations of best assignments and quantities, wherein a measure of the utility at the least one state of the at least one attribute is used to compute a rating for the overall satisfaction of a request with respect to a given offering by using at least one technique selected from the group consisting of: (a) weighted fuzzy-logic conjunction operators, (b) weighted geometric means, (c) a weighted version of Yager's T-NORM, (d) weighted arithmetic means, and (e) a weighted combination, with the weights derived via analytic hierarchy analysis, and

Art Unit: 3693

wherein different instances of at least one module of the entire system is specialized for each different market. However, Verba discloses these steps [Abstract; Figures 1-4, 9; C2 L13-L36; C3 L26-L37; C4 L38-L60; C6 L24-L53; C22 L66 to C23 L56] to creating a uniform measure of value and a sophisticated computer-implemented business management system, which describes both in general terms, and with respect to specifics useful in real estate marketing where the buyer has its own requirements. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to modify the disclosure of Shoham, Lupien and Conklin and include multi-agent system with mathematical algorithm to create a uniform value and a market (buy/sell) system to help agents in marketing their goods and service.

Claims 41-42 and 44 have same limitations as claims 14-15 and 17 above, respectively. Therefore these claims are rejected with same rational as claims 14-15 and 17.

### ***Response to Arguments***

5. Applicant's arguments filed 7/5/06 have been fully considered but they are not persuasive.

Applicant is required to consider entire prior documents. Examiner tries his best to include at least one passage that describe the concept related to the applicant's invention.

In response to Applicant's argument (page 18 remark) recites ""(a) creating a buyer's abstract representation of at least one attribute of a request, and the relationship

Art Unit: 3693

between at least one utility of the request and at least (me slate of the at least one attribute." This assessment is inaccurate. ..." 1. Shoham discloses product and goods [col. 3 line 31-33; col. 4 lines 10-23 and an example col. 4 line 663 to col. 5 line 13] and "buyer purchase specification" [claim 1, page 8 line 66] and description of goods or service [claim 7, page 9 line28-29]. It is obvious to one ordinary skill in the art of procurement that any product/service has attributes (which describes the product and its utility such as part number and model number) and these attributes are included purchase specification which describes the utility and state of an arbitrary attribute, for example, a designer of way-side substation requires a circuit breaker (contactor) 360 KVA either he/she has to provide a part number from a catalog or specify in his request or specification the power, size and may be connection type of the circuit breaker, otherwise how the supplier knows what to price and sell. An automation of such a manual process is not a patentable idea (see In re steele). For example, Shoham discloses [col. 4 lines 65] "Fords" and "Cadillacs", which are known to be motor vehicle (at least in USA). The purchase specification describes what type of vehicle (utility and one attribute– truck & size, tow-truck, car & size), options (color), etc. in addition to price and quantity.

Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims In response to applicant's argument (page 18) that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., "This is substantially different from the

Art Unit: 3693

specifications used in the DME”) are not recited in the rejected claim(s). . See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

In response to applicant's argument (page 19) that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., “Shoham does mention that a schedule could depend on quantity, particular products and options, the prices of competitors, and a new schedule "submitted for other reasons.” and “Shoham does not describe a system for representing arbitrary attributes of an offer, or for relating the price of the offer to such attributes) are not recited in the rejected claim(s). See *In re Van Geuns*.

In response to applicant's argument (page 19) that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., “committed protocol”) are not recited in the rejected claim(s). See *In re Van Geuns*.

In response to applicant's argument (page 20) that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., “non-market” and “rank-order”) are not recited in the rejected claim(s). See *In re Van Geuns*.

In response to applicant's argument (page 20) that there is no suggestion to combine the references, the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one

Art Unit: 3693

of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). In this case, providing optimization approach which maximizes sequentially the mutual satisfaction at each stage of the allocation process, by assigning allocations based upon the highest remaining mutual satisfaction value and where the approach has the virtue of being computationally tractable and generally yielding allocations with tight spreads in price [C12 L33 to C14 L55; C12 L33-L36; C13 L48 to C14 L8].

In response to applicant's argument that (page21) Lupien is nonanalogous art, it has been held that a prior art reference must either be in the field of applicant's endeavor or, if not, then be reasonably pertinent to the particular problem with which the applicant was concerned, in order to be relied upon as a basis for rejection of the claimed invention. See *In re Oetiker*, 977 F.2d 1443, 24 USPQ2d 1443 (Fed. Cir. 1992). In this case, matching of buyers and sellers bid and offer based on a satisfaction and profile and matching the specification of the buyer and seller for a product or service are same as a financial transactions based on auction.

In response to applicant's argument (page 21) that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., "average price") are not recited in the rejected claim(s). See *In re Van Geuns*.

Referring to applicants arguments pages 22-35, applicant argument failed to point out the missing limitation(s), instead explains the prior arts in general way.

In response to applicant's argument (page 27) that secondary reference "Lupien does not disclose how to represent the degree of buyer or seller ..." Secondary reference

Art Unit: 3693

discloses what is not disclosed by the primary reference. See primary reference(s), which discloses an online buying/selling concept for goods and service, which are presented by procurement/specification.

In response to applicant's argument Shoham does not disclose use of ontology, Applicant failed to disclose in original specification "ontology" which is applicant's defined work. Examiner scanned the original specification and did not find any reference to "ontology", therefore, examiner used the word as it is defined in google and Webster dictionary and related to purchase specification (which defines an object with attributes or product part number/model). Applicant failed to provide page number(s) from original specification which defines this word. If applicant insists that this is a well-known (to an ordinary skill in the art) and acceptable word for meta-data, it should provide a reference such as computer dictionary, which defines this term. Examiner will be happy to provide prior art references for meta-data or classes (OOP), which defines an object with attributes.

Applicant argument failed to point out the missing limitation(s), instead applicant explains (page 19-35) the prior arts in general way.

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant is required under 37 CFR ' 1.111 (c) to consider the references fully when responding to this action.

US 6,167,564 (Fontana et al.) discloses a system for integration of software development tools and applications into a system in order to build a heterogeneous development framework, and Protocol such as XML, UML, etc.
